WE ARE YOUR PROJECT COORDINATION TEAM!

PROJECT COORDINATION

What do we do?

- Follow and support projects through their full lifecycle
 - Proposal → Handoff → Publication
- Review deliverables and provide feedback
- Support NPO with project partner relations, tracking projects/partners and assessing projects' strengths.

Deliverable Process:

10 BEST DELIVERABLE TIPS

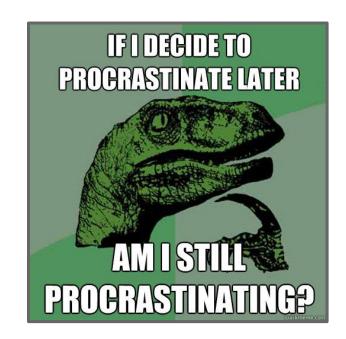

Keys to project success!

TIP #1 - START EARLY!

Deliverables take **time**. Don't wait until the last minute to start!

- This especially applies to the Project Video & the Tech Paper
- Team members should always have something to do!
- It's best to have ALL team members review your deliverables before submission

TIP #2 - FOLLOW TEMPLATE DIRECTIONS

Templates have directions about what goes into each section \rightarrow follow them!

Many also have comments with suggestions about how to complete deliverables → read them for further clarification!

Commonly Ignored Directions

Conclusions

Use bullets.

Use complete sentences with periods.

1. Abstract

Placeholder - do not put anything here until the final draft submission. The abstract in the project summary is where the working draft of the abstract should "live"]

TIP #3 - PROPER PROJECT SHIRT TITLE & NOMENCLATURE

Short Title: Study area + Primary application area

Ex. Great Bear Lake Water Resources

Nomenclature: YearTerm_NODE_ProjectTitle_Deliverable_RD/FD

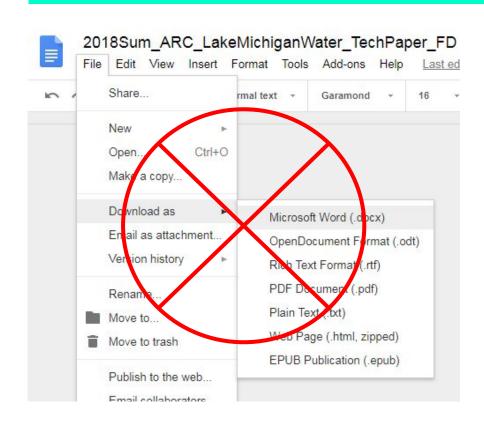

Ex. 2018Fall_MA_GreatBearLakeWater_Poster_RD

Common Mistakes!

- **Shortening** the short title:
 - Ex. Great Bear Water
- Incorrect node acronym or project title
 - Ex. 2018Fall_Boston_GreatBear

TIP #4 - GOOGLE DRIVE CONVERSION BEWARE!

If you decide to use Google Drive, do not download your deliverables using the "download as" function because the conversion process messes up the formatting in deliverable templates!!!

TIP #5 - HOW MUCH TO INCLUDE IN THE ROUGH DRAFTS

"How can I complete my tech paper rough draft in week 4 if I don't have all of my methods figured out and don't have results yet?"

- That's okay! Simply provide us with what you do have
- We understand the the methodology can change
- We don't need results in the RD to know that you are working hard

TIP #6 - KEEP TRACK OF AND KNOW YOUR DATA SOURCES!

Read data user guides, website documentation, & metadata:

- What is the proper dataset name?
- Basic metadata: date, attribute table information, resolution, how the data were collected or compiled
- Who created the data (this could be different from the organization or data portal you got it from)

You can reference management softwares, such as **Zotero** or **Mendeley**, to share sources and track citations.

TIP #6 CONT. - REFERENCING SATELLITE DATA

Proper and MANDATORY Copernicus acknowledgement wording:

"contains modified Copernicus Sentinel data (yyyy i.e. 2018),

processed by ESA."

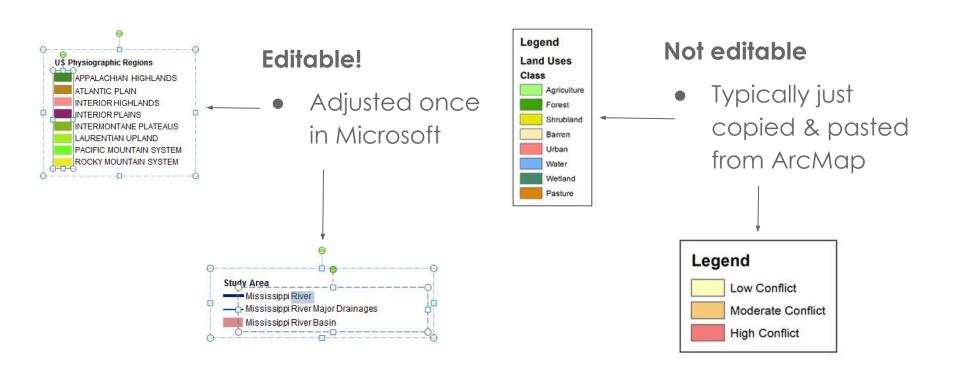

Understand your satellite data products:

- Explore the DAAC and product websites
- Find the formal dataset name
- Thoroughly read metadata
- Cite using Digital Object Identifiers (DOI)

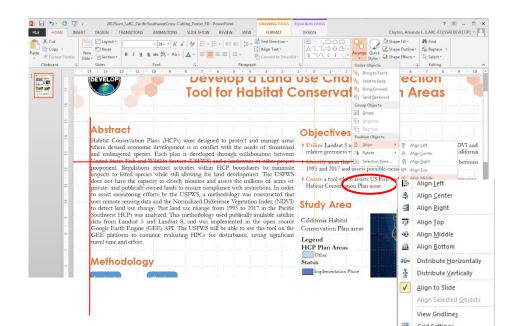

PRESENTATION	stered Radiance at the

	Radiance at the Sense 90
	Radiance at the Sensor 15, 3 Orthorectified 8, Registered Radiance at 15, 30 Orthorectified 15, 30
L HAVEN'T HEARD IN A LONG TIME	10, 3

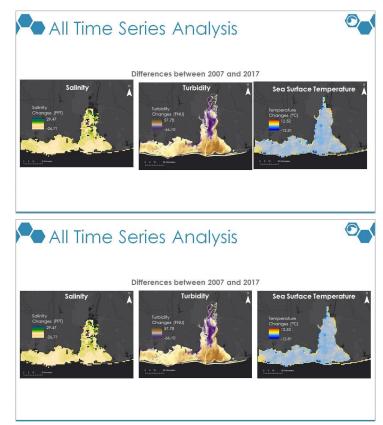

TIP #7 - MAKE ALL LEGENDS SEPARATE AND EDITABLE IMAGES

TIP #8 - GET FAMILIAR WITH THE ALIGN TOOL

- Use it to align text, images, etc.
- It also has a great distribution tool!

TIP #9 - RESULTS VS. CONCLUSION: KNOW THE DIFFERENCE!

Results:

 "We identified 10 oak trees and 80 pine trees"

Number of Dry Wells in Study Area, 2012

Dry wells

Dry wells

Dry wells

Conclusion:

- "The environment favors pine trees."
- "Wells in the study area were most likely to dry out during the summer dry season; however, most wells replenished during the fall rains."

TIP #9 CONT. - EXAMPLES OF CONCLUSIONS GONE WRONG

"This project automated the flood probability algorithm created by term I of the project."

"An interactive map of environmental and socio-economic layers was generated to dynamically query and visualize weekly data."

"This project produced a mathematical model that will transform VIIRS DNB imagery into measurement of predicted skyglow."

TIP #9 CONT. - CONCLUSIONS THE RIGHT WAY

"...Maryland's marshes are trending towards degradation and, if all contributing factors persist, will continue to degrade over time. Transitions in land cover were displayed spatially and graphically, but further work needs to occur to determine the driving factors behind those transitions. It is our anticipation that these analyses will successfully assist the Maryland Department of Natural Resources and The Nature Conservancy in identifying and restoring areas of marshland that provide the greatest risk reduction for coastal communities..."

The Purpose of a Conclusion:

- Revisit your main idea/research questions
- Connect the paper's findings to a larger context
- Suggest the implications and importance of your findings
- Ask questions or suggest ideas for further research

TIP #10 - KEEP YOUR PROJECT PARTNER LIST UPDATED

It's okay if you **add a new partner or drop one** over the course of the term but make sure to **tell someone** from **Project Coordination** or **Impact Analysis**

Proper Partner Nomenclature:

- X USDA, Pocatello Field Office
- USDA, Natural Resources Conservation
 Service, Pocatello Field Office
- X Groundwork Milwaukee
- Groundwork USA, Groundwork Milwaukee

IF YOU'RE LOST, ASK FOR HELP!

You don't need to struggle with deliverables, the Project Coordination team is here to help:

- Webinars
- Email
- DEVELOPedia

There are no "dumb" questions. Ask us anything; we want you to succeed!

BONUS TIP - BEFORE YOU SUBMIT!

- Review your deliverable along side a blank copy of the template
- Go through the Deliverables Checklist

"Make it nice or make it twice!"

- Lauren Childs-Gleason
