Applying NASA Earth Observations to Monitor Marsh
Migration in Maryland's Coastal Croplands

Community Concerns

Rising Sea Levels Induce Saltwater Intrusion

Seawater enters the soil, increasing the salinity content of the land used for farming

Increased Salinization Leads to Inhospitable Farming

Changes in soil geochemistry damages crops and creates patches of unusable soil

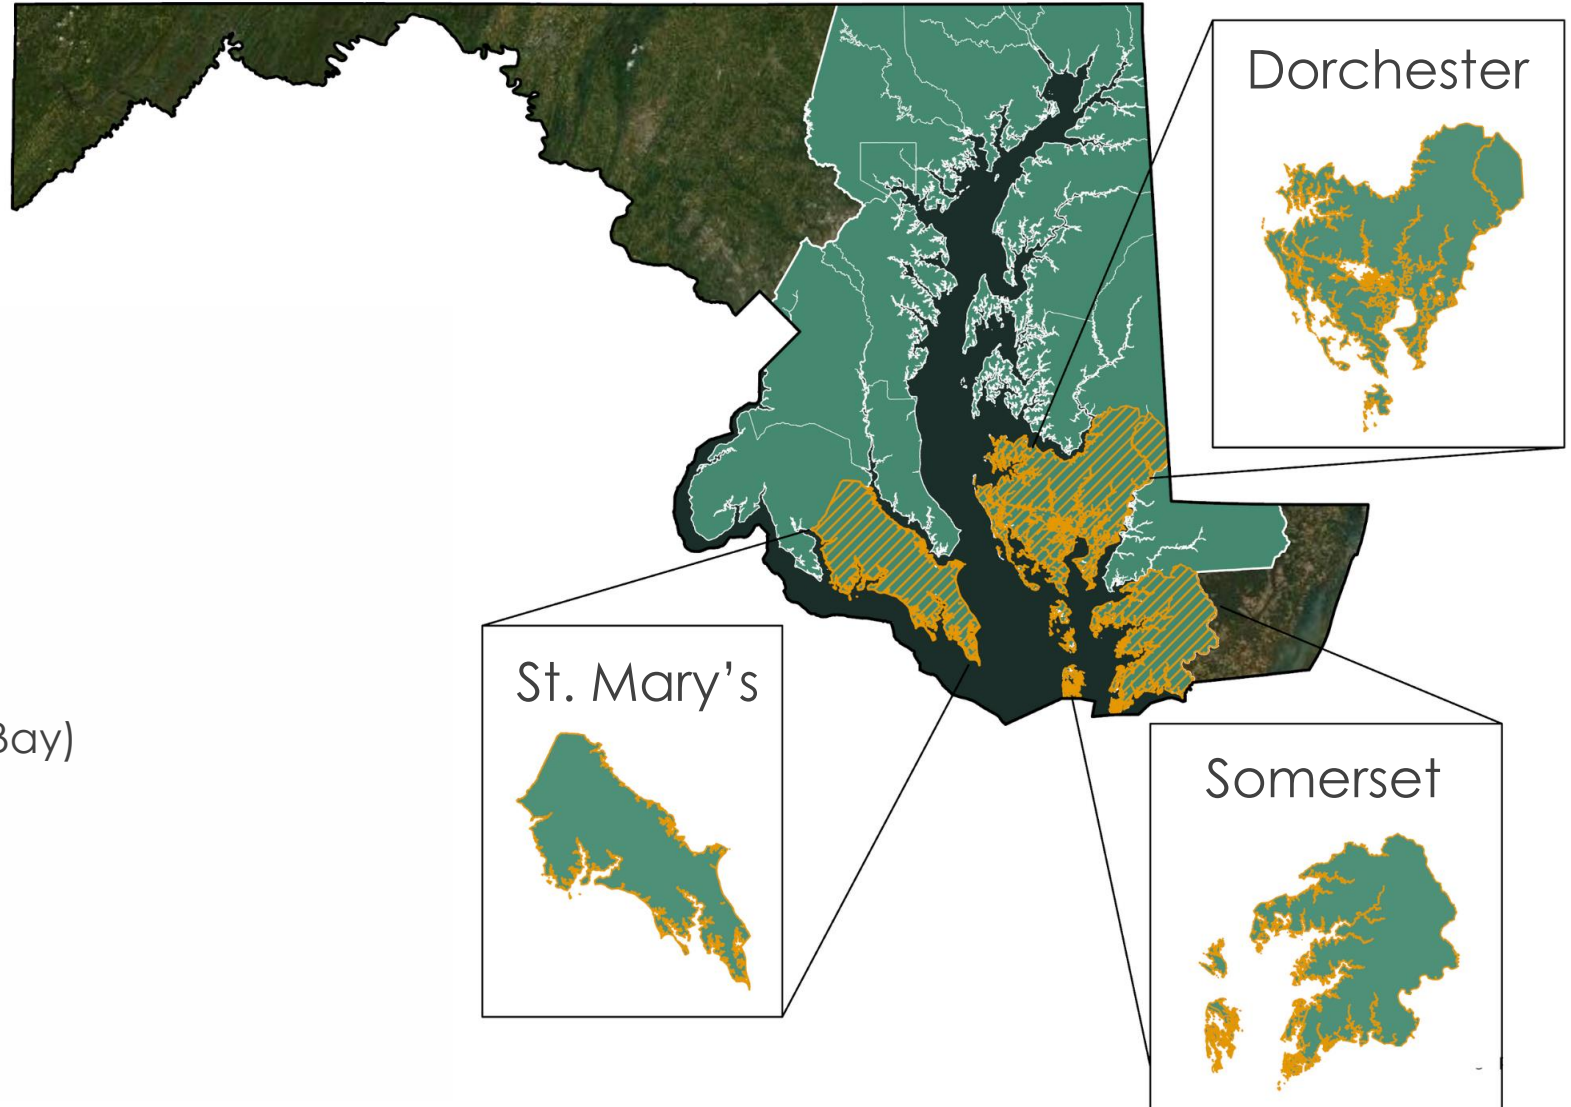

Cropland Loss Diminishes Agricultural Productivity

Disrupts the livelihoods of farmers who rely on the land for their income and personal wellbeing

Study Area and Study Period

Study Period: 2001–2021
Forecasting to 2040

 Study Area (Chesapeake Bay)

 Counties of Interest

Project Objectives

Create

- Create Land Use Land Cover (LULC) Maps from 2001–2021

Demonstrate

- Demonstrate the Inland Extent of Marsh Migration

Forecast

- Forecast LULC Maps to 2040

Earth Observations

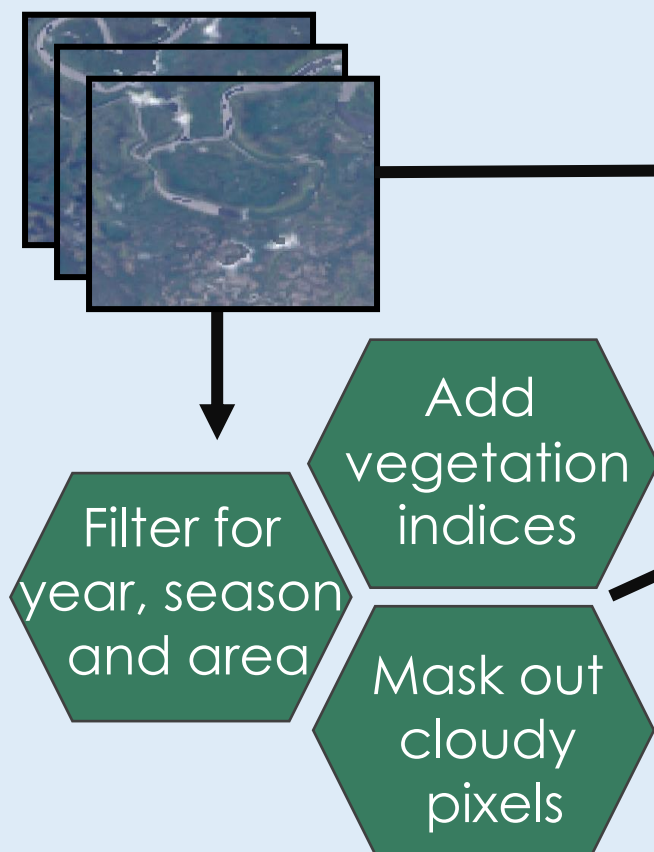

Landsat 5 TM

Landsat 8 OLI

Google Earth Engine LULC Methodology

- ## Image preprocessing

Landsat 5 TM and 8 OLI Collections

- **Create training data**

Training Points

- ## ► Run the classifier

Random forest classifier

LULC Maps

Denotes GEE Script

- ## ► Validate results

NAIP Imagery

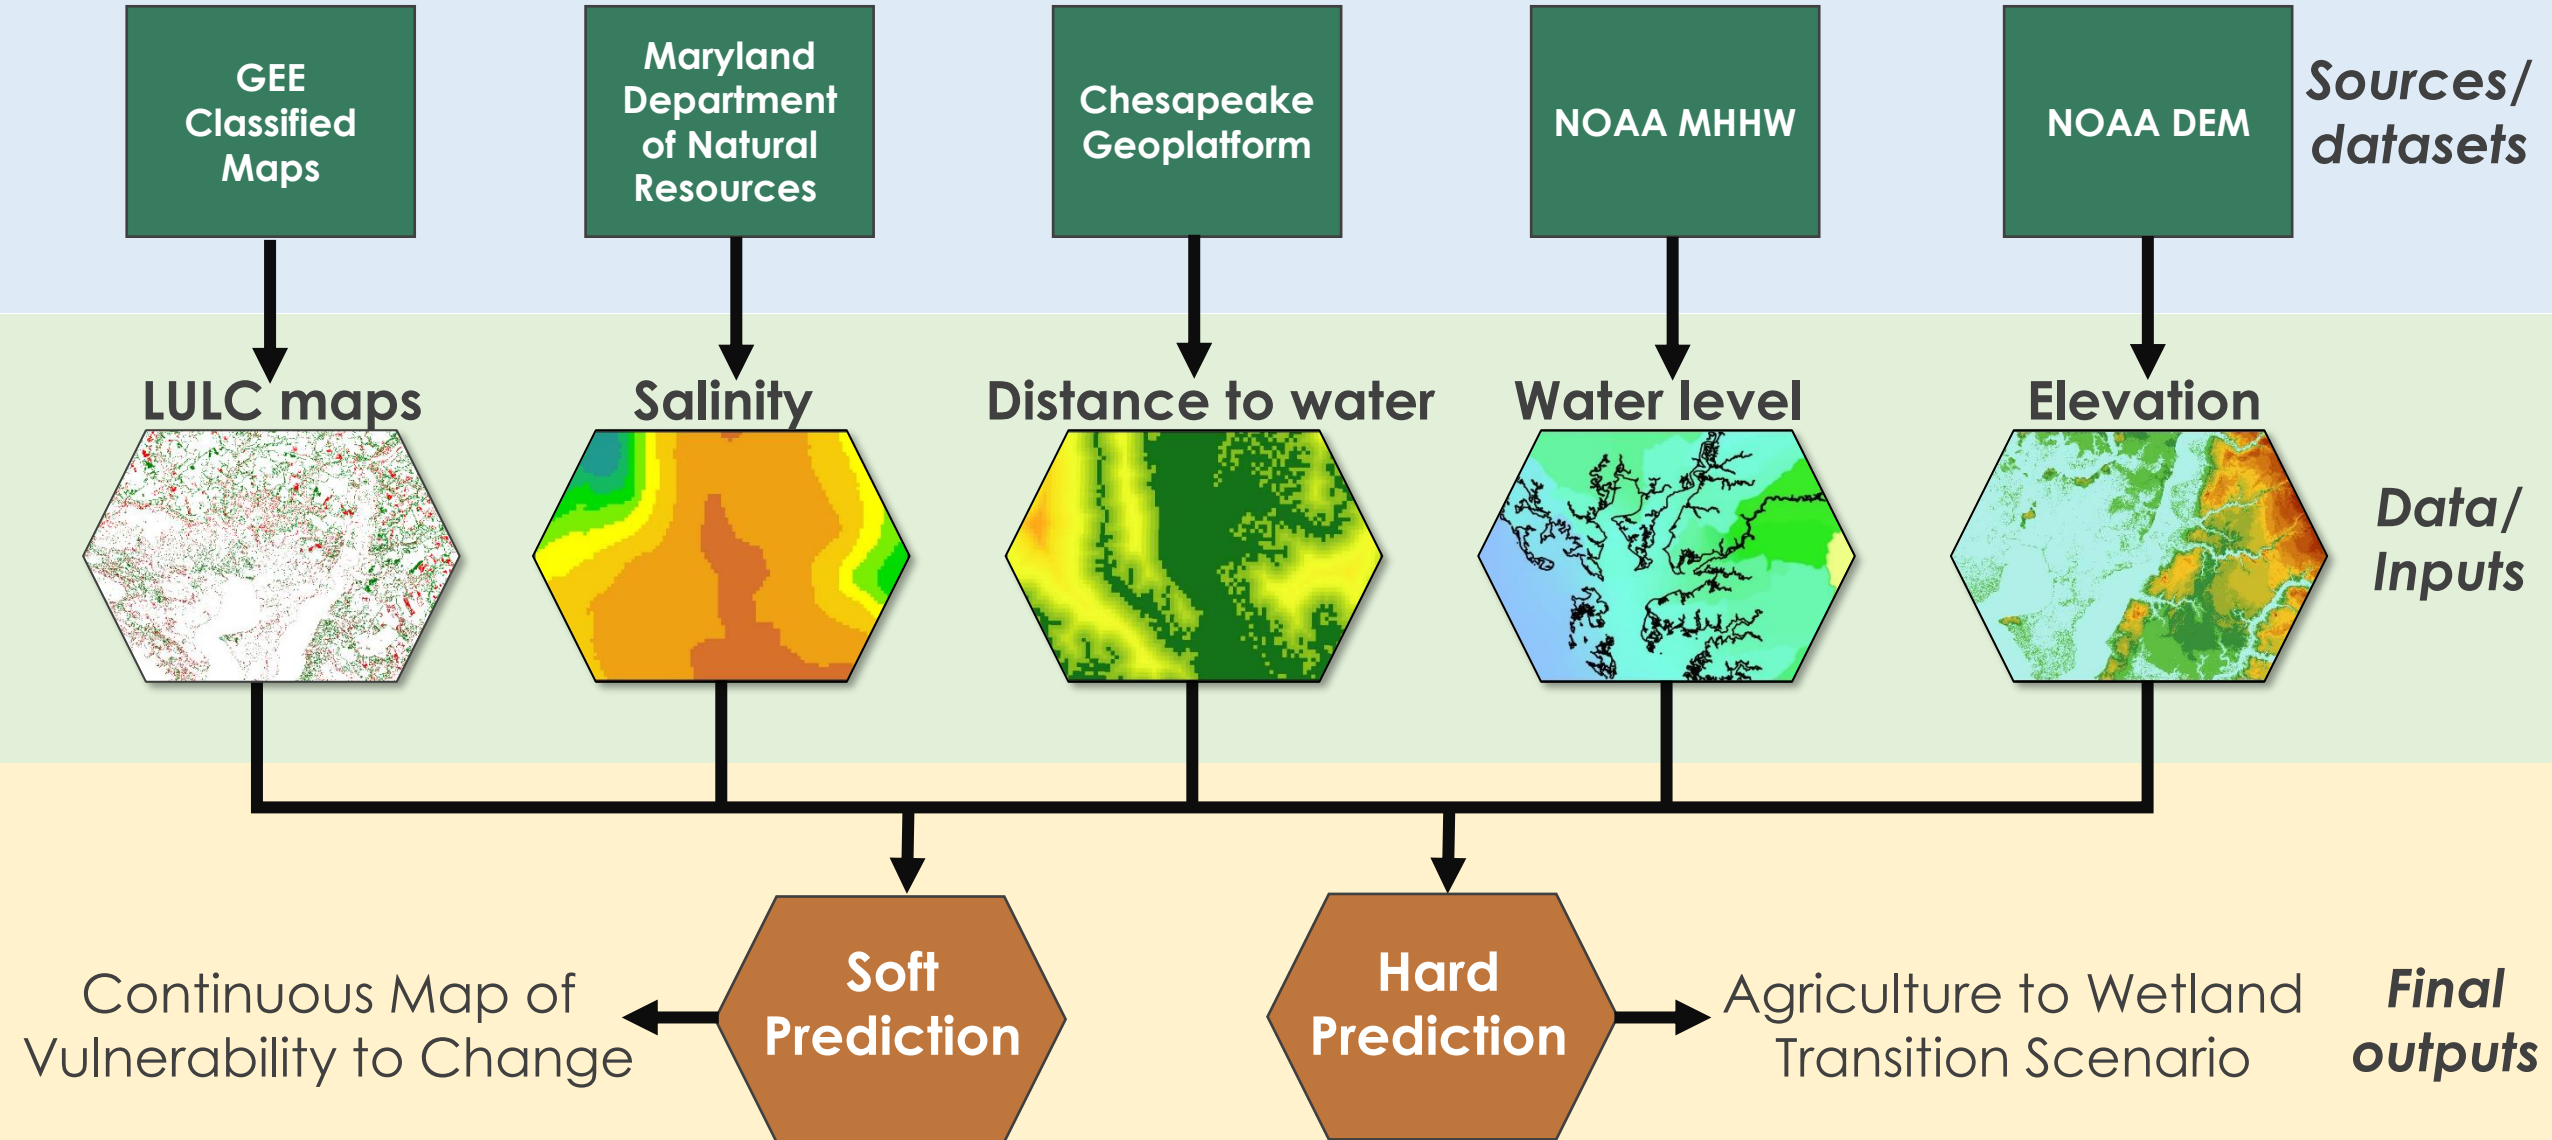

Random Test Points

Marsh Migration

Changes in Wetlands & Agriculture (3 Counties)

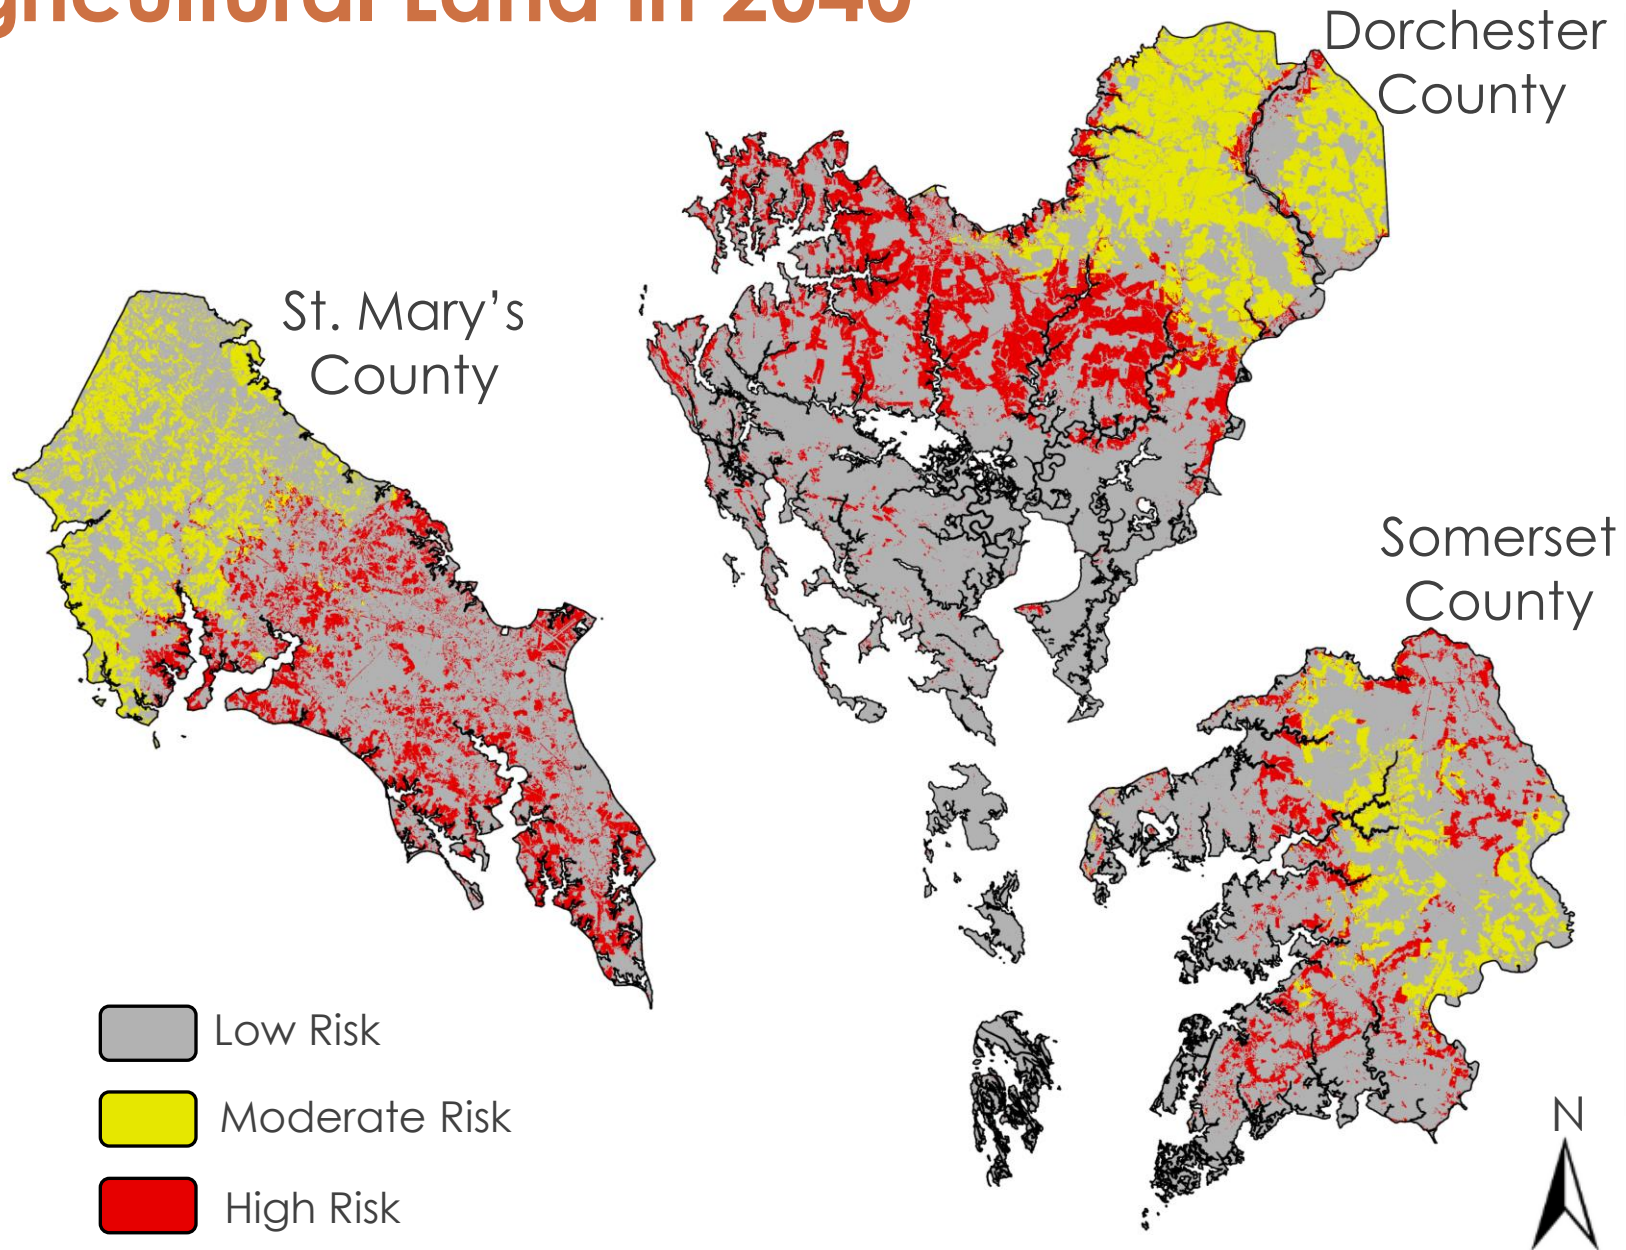

Transition Croplands → Wetlands (2001 – 2021)

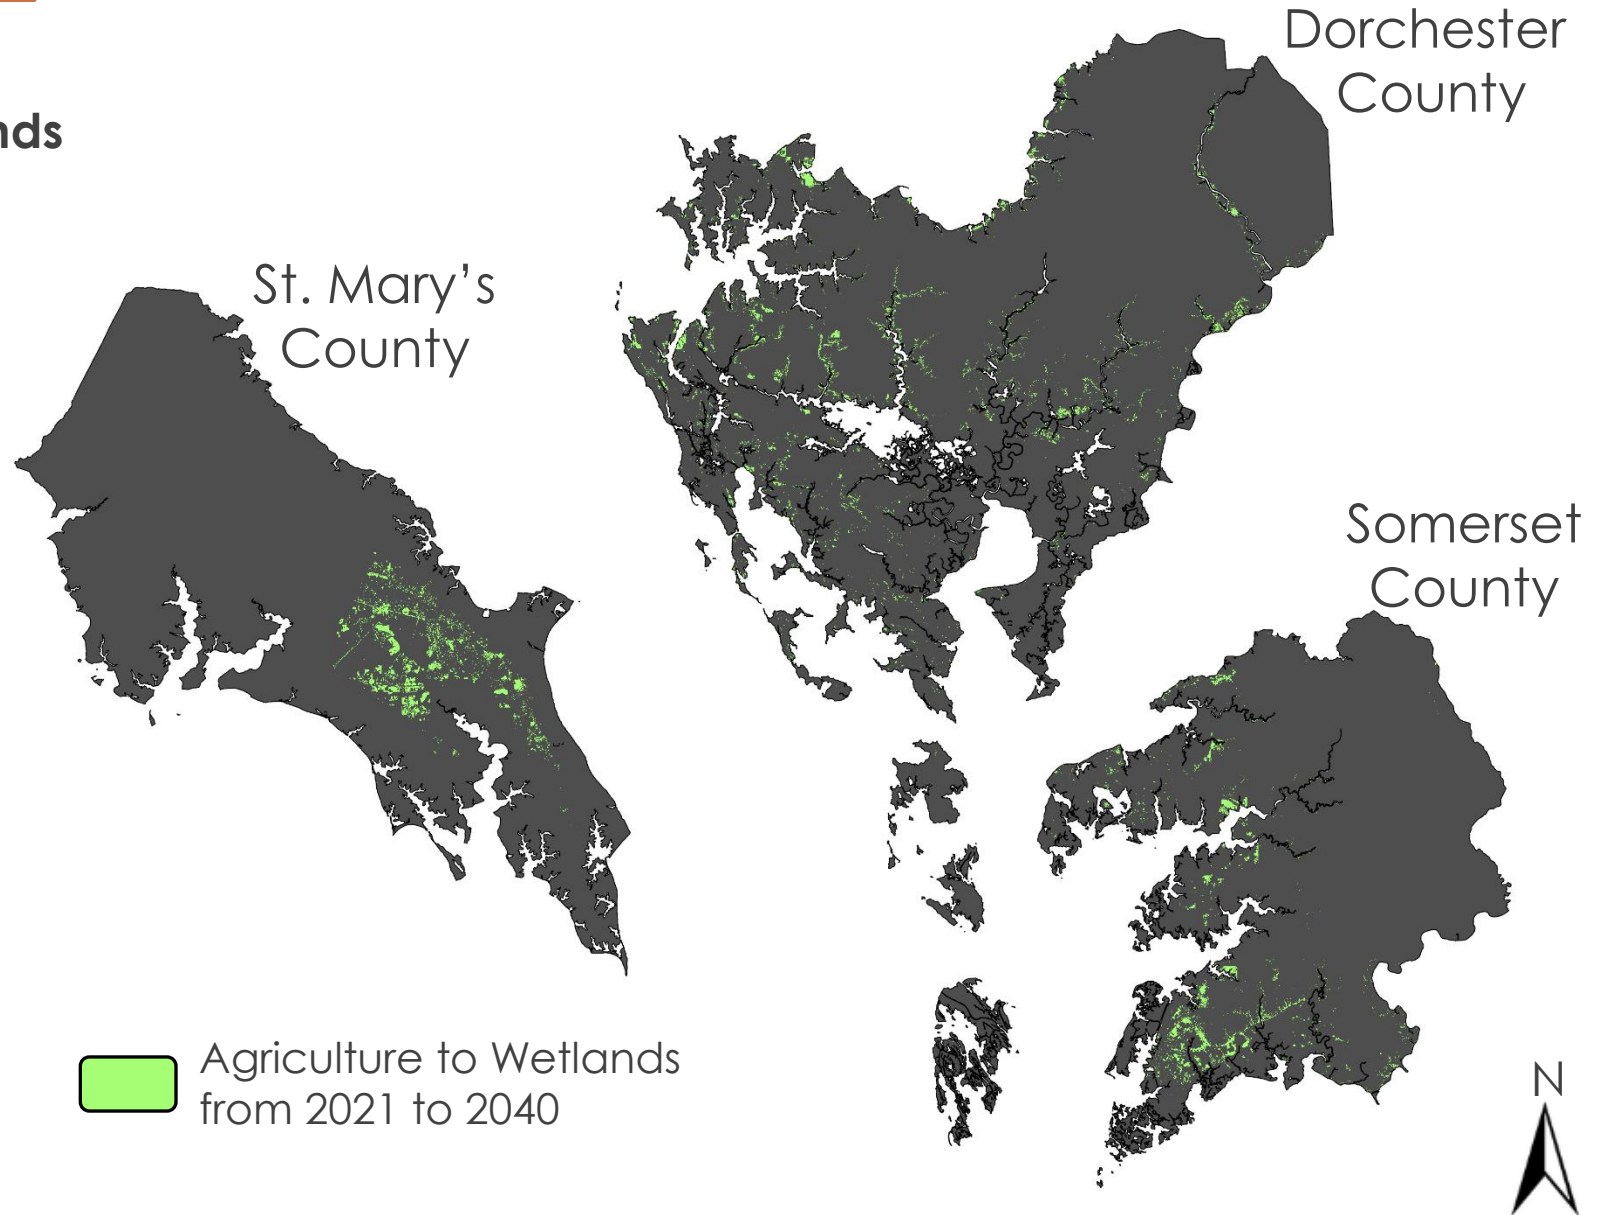

Soft Prediction for Agricultural Land in 2040

Agricultural Area At Risk of SWI in 2040

Hard Prediction for Agriculture → Wetlands transition

Potential Transition Croplands → Wetlands
(2021 – 2040)

Conclusion: Main Takeaways

Wetlands have **replaced 60,000 acres** of cropland since 2001 in the study area

The area of marshland in the study area **increase by 150,000 acres** over the past 20 years

Forecasting models suggest similar trends to the present, with a **potential loss of 58,000 acres** of agricultural land through 2040

Limitations and Future Work

GEE Classifications

Errors in land cover classification and data acquisition

Forecasting Drivers

Uncertainty in land cover prediction models

Spatial Resolution

Limitations from 30m x 30m pixel size
